Entry Screening
Powered by Clear2

PROTECT YOUR EMPLOYEES + ENSURE COMPLIANCE
WITH **Clear2** SIMPLE SOLUTION

Safe-T Entry Access powered by Clear2 is a first line of defense, wellness management screening solution that provides temperature and symptom checking to protect employees and clients.

Comprised of a mobile app and a temperature verification kiosk, Clear2 makes daily screening quick and effective by combining mobile technology with a temperature verification. Coupled with a powerful administrative portal to manage and organize screening data, Clear2 is a comprehensive strategy to safeguard people and mitigate employer liability.

SOLUTIONS FOR ALL BUSINESSES & INDUSTRIES

THE Clear2 SIMPLE SOLUTION

■ PRESCREENING

The mobile app allows for the initial daily symptom assessment to begin offsite in order to mitigate the interaction of sick employees while providing a virtually touchless check-in process upon entering the office. Updated lists of CDC symptoms and guidelines are included in the app. Users complete a daily health screening in the Clear2 app before they come into work and can validate their status with a quick temperature check once they arrive using the temperature verification kiosk.

■ ENTRY ACCESS TEMPERATURE CHECK

Using the hands-free thermal temperature scanning kiosk, the temperature is verified, and a validation QR code is displayed to either the employee or guest. This validation is required for entry into the location.

■ CHECKPOINT QR CODES

Using their personal device, users can scan various "checkpoint" QR codes that are set up based on the logistics of a particular location. These unique QR codes can be separated by buildings, floors, wings, or locations to allow for attendance data to be segmented and queried to provide valuable tracing data in the event of an outbreak.

■ DATA MANAGEMENT VIA ADMINISTRATIVE PORTAL

The Clear2 administrative portal gives organizations a real-time, streamlined view of all recorded activity. Each user's status is clearly shown, along with all validation and Check-In dates and times. No personal or symptomatic data stored. Reports can easily be queried and exported in a spreadsheet format, giving companies greater control.

REAL-TIME TRACKING + REPORTING

INDIVIDUAL	DATE	CDC GUIDELINES COMPLETED	HEALTH CHECK COMPLETED	TEMP CHECK COMPLETED	PRE-SCREEN COMPLETE	VALIDATED	FAILED DAILY CHECK	FIRST CHECK-IN
Henry Mac...	2020-09-01	✓	✓	✓	✓	✓		9:21 AM (EDT)

■ TELEHEALTH

An integrated telehealth provider is offered through the Clear2 application. A custom telehealth link can be added for clients with their own provider. Remediation options can be customized, and this link can connect to a customer's own telehealth provider or human resource department.

HOW Clear2 WORKS

1

DOWNLOAD THE Clear2 APP AND GET REGISTERED

The Clear2 app is free for any user to download from Google Play or the Apple App Store. Registration requires an email address, name, and password. Companies requiring employees or visitors to utilize Clear2 will have an organizational invite code that users will enter during the registration process and ties them to the company. Once a user is registered, they can log in using the email address and password they created. They will need to allow camera access for scanning of validation and checkpoint QRs.

2

COMPLETE THE DAILY HEALTH SCREENING IN THE APP

Once a user is logged in to the Clear2 app, they will tap 'Begin' to start their daily health screening. A licensed user can also schedule an appointment with a medical professional via telehealth at this point. Daily screening has three sections:

1. CDC BEST PRACTICES

Users will read and acknowledge their understanding of infection control best practices from the CDC in this first section. Clear2 regularly updates this information as new guidance is released; users will receive a notification within the app anytime there are new guidelines to review.

2. HEALTH CHECK

Users are guided through a series of questions to determine whether they have been exposed to COVID-19 or if they are exhibiting any symptoms of the virus. They are asked about their current temperature, specific symptoms of COVID-19 such as cough, congestion, loss of taste, and difficulty breathing, and whether they have been around anyone who may have been exposed recently. If a user's answers during the health check indicate that they may be affected by COVID-19, they will not be cleared to go to the work location.

In a post-COVID-19 workplace, screening may still be required and the app can be updated to reflect current screening criteria.

3. TEMPERATURE CHECK

Users have two options for a temperature check. They can take their temperature at home and submit the thermometer reading via the app or they can skip the temperature check. A user may skip the home temperature check if their organization has an on-site Clear2 Kiosk (or other temperature screening device) that scans them once they arrive at work. Users must have a normal temperature (under 100.4 F) in order to receive validation and entry into a location.

If a User Exhibits a Temperature Over 100.4F

A notification email is automatically sent to the company Clear2 administrator if a user displays a temperature over 100.4F. This notification will come from the Clear2 app if the user completes their temperature check at home. If they are scanned on the Clear2 Kiosk, the notification will be sent at that time.

3

COMPLETE VALIDATION AT THE WORKPLACE

When a user successfully completes their health screening at home, they can head into work. The next step is for the user to validate their normal temperature when they arrive at the organization's location. This can be easily accomplished with the Clear2 Kiosk; verbal and on-screen instructions guide users through the process. Simply stand in front of the kiosk, which conducts a thermal scan to quickly check the person's temperature; if the temperature is normal (under 100.4 F), a QR Code is shown on the kiosk screen. The user then scans that QR Code with their Clear2 app and is cleared to enter.

4

CHECK-IN ANYTIME YOU LEAVE AND COME BACK

If a user must leave the location and come back later (going to lunch, for example), they must use their Clear2 app to scan a Check-In QR Code that is posted inside the workplace. This Check-In functionality allows for detailed tracking of users' movements and contact tracing. Each scan of a validation or Check-In QR Code is recorded in the Clear2 administrative portal.

5

IF THE HEALTH CHECK AND/OR TEMPERATURE READING INDICATES A POTENTIAL INFECTION

The user will not be cleared to enter the organization's location. A notification will be sent to the Clear2 administrator, and the user will be advised via in-app notification to alert their supervisor and seek medical attention.

Clear2 KIOSK

The Clear2 temperature screening kiosks are compact, easy to set up, and able to scan large numbers of employees or guests without additional staff. A standard electrical outlet is all that is required. The sleek design of Clear2 Kiosk blends in with any décor.

TELEHEALTH

If a user is feeling ill, they can schedule an appointment with a medical provider of the employer's choice or internal contact.
